

Environmental Policy

It is the policy of Capital Solutions to minimise our impact on the environment by recognising that concern for the environment is part of our corporate responsibility. We will endeavour to manage our activities in a way that works towards that objective.

In order to achieve that objective the following areas have been identified from our Effects Register as having the highest priority and ones that the company can influence effectively:

- Comply with all relevant Environmental legal and statutory legislation and other requirements
- Servicing and packaging waste
- Segregation of waste for recycling
- Recycling of equipment
- Electrical & gas consumption

The Company's environmental policy will be communicated to all staff and will be available to the public through the company's web site. The company will commit adequate resources to enable the above objectives to be achieved.

An Environmental Management System – E.M.S. – has been developed - implemented and was accredited in March 2006 to EN ISO 14001 which now incorporates all Company Branches.
